

CATTLE GRID

Cattle grids secure livestock storage facilities: because of fear of heights, cattle cannot pass along the grid. This concept leaves clear way to wheeled vehicles.
Specially designed for intense traffic, Normandie Stabulation's cattle grid meets industrial sites requirements.
Each project is the subject for a specific study guaranteeing the functionality of the equipment.

Depth ± 750
Peripheral rebate 240 x 125
Rainwater connection

Welded Construction - Steel Quality S235 - Hot Galvanized Finish according to EN ISO 1461 2009
