

### Small Cattle ANESTHESIA DRIVING CORRIDOR

- Single, double or multi-directional access tunnels supply up to 300 pigs/hour to the anaesthesia line.
- Upstream, the system is equipped with electric rolling doors/ pneumatic sash and requires less operators.

The electric rolling door and pneumatic sash allow adjustment of the available space as the animals move onto the anaesthesia line.

- Circular restrictive pen, the size is adjustable to the slaughter capacity.
- Facilitates operators work by adjusting space as animals are anaesthetized.

Mobile or remote control unit offers multiple working solutions.
